INTRODUCING THE NEW ZEBRA TC8000 TOUCH MOBILE COMPUTER

INCREASE PRODUCTIVITY BY 14%

What makes the TC8000 so special? Everything. This ground breaking, all new warehouse mobile computer was designed from the ground up to increase worker productivity by 14 percent. How? Zebra has minimized the 'tilt and verify' motion required to interact with the device and an application with a new device design and an easy way to transform the legacy Terminal Emulation application into elegant and intuitive all-touch graphical screens—without any coding or modifications to a host application.

With the TC8000, workers can choose how they want to scan: point to scan, or with Zebra's ground breaking proximity scanning feature—an industry first in a handheld rugged mobile device—workers can wear the TC8000 in a hip holster or on a shoulder strap, or place it in a cart mount or desktop mount and simply pass items in front of the TC8000.

When it comes to reliability, the TC8000 is rugged inside and out, built to handle multiple 8 ft./2.4 m drops to concrete, 2,000 consecutive tumbles, jetting water, dust, and extreme temperatures. Users

also get the largest battery offering triple-shift battery power and extensive battery metrics that make it easy to spot and retire aging batteries. Also, the advanced touch screen enables workers to interact with an application using a gloved or ungloved finger or stylus, complete with pinch-and-zoom and other multi-touch functions.

The TC8000 is like adding an extra hour of productivity per worker to the work day.

FEATURES AND BENEFITS:

Ergonomic Body

Up to 33% lighter than traditional models to reduce muscle fatigue among workers. Sometimes less is more.

Revolutionary Screen

Designed to face the user while scanning, the larger screen eliminates the need to tilt and verify each scan, increasing efficiency on every scan.

Reduces Wrist Motion

The new scan angle eliminates the constant tilting that traditional designs require to view the screen, increasing productivity by 14%* through a 55% reduction in wrist motion and a 15% reduction in muscle effort.

Enterprise-Class Android™ KitKat

Mobility Extensions transforms the Android into an enterprise-class OS, providing enterprise-class security, device management and data capture capabilities.

Warehouse-Ready

The super-rugged design is built for the challenging warehouse environment. With our most extreme impact ratings, the TC8000 operates reliably, even after 2,000 consecutive hits when tumbling and multiple 8 ft./2.4 m drops to concrete.

Hot Swap Battery

Change to a charged battery quickly and seamlessly without powering down the device.

Virtual Keyboard

The all-touch keyboard allows users to type up to 40% faster with 60% fewer errors compared to traditional push-button keyboards.

Please contact your Eagle representative to discuss your device requirements.
