

# Summer 2021

Eagle Europe Newsletter

## UPGRADES, IMPLEMENTATIONS AND MOVING TO THE QAD CLOUD

We've been busy here at Eagle over the past few months, with lots of new implementations, upgrades and moves to the QAD Cloud. We're excited to share some of our highlights with you. Take a look at what other customers have been up to and if you have any questions about any of our recent projects please get in touch.

## KEY HIGHLIGHTS FOR SUMMER 2021

- One of our Life Sciences customers went live with Eagle at their third site. They can now make use of Eagle for receiving/inventory, production issue/receipt, and customer shipping.
- In California two new life sciences customers have partnered with Eagle Consulting and Development for implementation and are excited to make use of Eagle's experience and robust functionality.
- A new industrial products customer implemented Eagle throughout its manufacturing site using Eagle's label single-scan technology to process lot and serialized inventory efficiently.
- A long-time Eagle automotive customer has started an implementation with the latest version of QAD and RF Express at a new division. This implementation includes receiving with attributes, license plating, inventory movements, production orders, AIAG labelling and shipping.
- Several existing global customers have upgrade projects underway where they will run Eagle on the QAD Cloud with the latest QAD versions.

# Honeywell

## HONEYWELL LATEST NEWS

We've seen a big shift in customer's choice of technology, with many turning to Android to suit their needs, Honeywell's CK65 and CT60 Android handheld devices offer improved scan engines to give greater flexibility for near and far range scanning, providing the perfect hardware solution for all environments. The RT10 rugged tablet, Thor vehicle mount terminals, wearables and Bluetooth/USB imagers offer perfect hardware solutions for even the most challenging of situations.

# Functionality Update

## WHAT'S NEW WITH RF EXPRESS?

Given the challenges we faced through 2020 and 2021, it's clear that adaptability and flexibility has been key. We instigated and continue Account Reviews with our customers which has ensured further ROI from Eagle RF Express for the QAD solution. Alongside this there are regular updates to our solution to ensure that you're always maximising and extending your investment to keep up with changes in your industry.

To ensure you're always staying competitive in your marketplace, here are some of our most recent improvements and enhancements that have taken place across the year so far.

## TRANSACTION SPOTLIGHT: WAVEPICKING

The new Wave Pick transaction allows multiple shipping department users to automatically receive their picking assignments based upon a range of orders/allocations. Order pickers can automatically receive their tasks based upon item, location, order range, customer, past due, and/or picking date/timeframe windows. The prompting is designed to facilitate paperless picking.

## WAREHOUSE SHIPPING, WHAT ELSE IS NEW?

The Preshipper, Shipper and Sale Order transactions have been enhanced to include integrated document printing and confirmation where applicable. Our new Shipper Item Pick (SSI) provides the same item, lot, quantity and locations as PSI, but for the shipping process where customers want to specifically start with a shipper.

## SOME OF OUR FAVOURITE DEVELOPMENTS

- Purchase Order Receipt (POR) improvements open quantity display, prompting, subcontract logic
- Production Order Pallet/License Plate Issue (PWI) have been enhanced with single-scan direct issue of material
- Honda Picklist (rfhpick.p) updates mean multiple shippers can be on one picklist to support Honda order patterns
- \$RF improved with active user display/scroll
- Container Label (rfcilab.p) - SSCC-18 label logic improvements; customer item input; shiptorestriction logic
- Continuous Transaction Processor (CTP) sees improved input file tracking and transaction processing
- Link Item/Pallet to Container (LNK) has an expanded pallet/license plate selection logic
- Pallet Load (PLO) has seen serialized item improvements
- Transfer Site (TRS) has been updated with additional prompt default options
- Set Default Printer (SDP) the user can now set/change their own default printer
- Label output to email utility for sysadmin, testing and use
- Various transactions have been enhanced with QRF print integration options

## EFFICIENCY IS KEY

We're always aiming to help you become more efficient, that's why we constantly add new functionality to our solution. The Purchase Order Receipt transaction includes improvements in prompt scanning reduction and open quantity display, as well as enhanced subcontract/production order integration.

## FUNCTIONALITY, ERROR-PROOFING AND STREAMLINING

We've added functionality, streamlining and error-proofing enhancements to multiple transactions including: Production Order Component Issue, Production Order Receipt/Backflush and Operation Activity/Labor Transaction. All of our production related transactions provide an easy transition path to mixed-mode reporting. Customer favourite, Kanban Backflush has improved partial quantity reporting checks to support customer needs.

Our Continuous Transaction Processor now provides even more automation options with additional supported transactions and input options

## A Message from the Eagle Team

We are customer driven and solution focused. It is our privilege to serve you. Eagle has proudly delivered RF Express for QAD to our global customer base for over 28 years. Your success has resulted in Eagle's selection as QAD solution or product partner of the year nine times. As one customer recently said, "Eagle knows the warehouse. Eagle knows the shop floor." We invite you to contact us at any time and thank you for the privilege of serving you.
