

### WHAT IS RF EXPRESS?

RF Express™ for QAD Adaptive ERP addresses many business problems involved with data collection, such as laborious manual systems, excessive paper forms, inaccurate and incorrect data collection, and delayed data posting. All of these burden businesses with excessive safety stock, high inventory, additional staff costs, MRP inaccuracy and ultimately lower customer satisfaction.

RF Express allows 100% portable and 100% online, wireless hand-held terminals with the latest scanning technology and portable label printing to be integrated into QAD Adaptive ERP. Data is collected quickly and accurately at the point of use. It is ideal for all types of manufacturing environments where companies want to collect labour, material or traceability information to enable them to run their business more effectively. It can be added to your existing QAD Adaptive ERP system like any QAD module.

“

*Building on a trustworthy partnership with Eagle..brought us instant visibility to the geographic footprint of each inventory record with time stamp.*

”

**Global Business Systems Manager- Laird**

### Goods-in: Efficient Raw Materials Recording

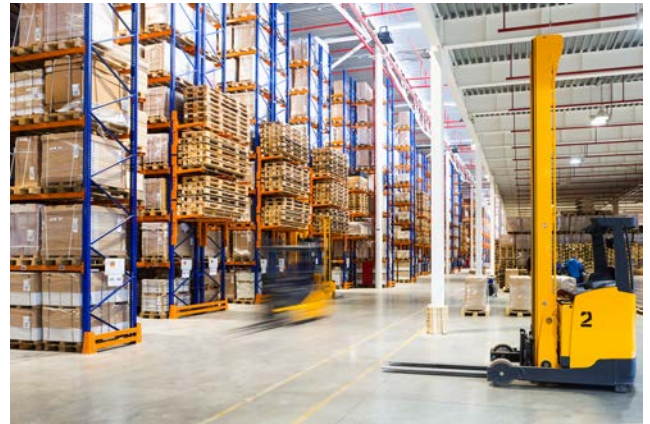

- Scan suppliers barcodes (including EAN-128) at point of receipt
- Stock immediately visible in QAD Adaptive ERP - no delay for it to be entered at a terminal
- Produce labels for goods as part of the receipt process if required
- Use labeling to help manage inspection
- Improve raw material accuracy - reduce manufacturing shortages and safety stock
- Quick, simple and easy to use cycle count and transfers by warehouse personnel
- Reduce/eliminate data entry errors which would otherwise be magnified throughout the manufacturing process

## Manufacturing: Gaining Maximum Benefit

- Record material and labour at point of use
- Record receipts and accurately label the finished goods real time
- Manage lot/serial controlled items simply and accurately
- Get an accurate picture of inventory and work in progress at all stages of the manufacturing process
- Support for repetitive, lean and standard work orders
  
- Automatically record the loading of finished goods in to pallets or containers for simple shipping
  
- Customer specific labels become straightforward
- Integrate the use of Kanban cards in QAD Enterprise Applications
- Cycle Count and Full Stock Take in real-time
- Reduce/eliminate data entry errors which would otherwise be magnified throughout the manufacturing process

## A Tried and Tested Solution

- QAD alliance product since 1993
- Available worldwide
- Serving 1000 customers in 6 continents
- Global support
- Single source for all software, hardware and consultancy
- Proven implementation methodology

## Shipping: a Straightforward Solution

- Locate goods real-time on handheld scanners
- Move containers and pallets in only two scans
- Scan pallets or containers onto shippers in two scans, even containers of mixed goods
- Accurately track finished goods out the door
- Enable full traceability
- Verify shipments at the dock
- Integrate with pegged schedules
  
- Create or build shippers and containers by scanning the goods to ensure validated shipments
- Record picking against sales orders real time to ensure an accurate picture of finished goods
- Produce customer specific container labels
- Speed up the invoicing process
- Control multi-level containerisation

## Technical Advantage

- Written in Progress, the native language for QAD Adaptive ERP providing the fastest response time
- Fully configurable without re-programming
- 100% Data Validation and Put-away through QAD Adaptive ERP sub-routines
- No Third-Party ODBC Interfaces or CIM load
- A variety of hardware supported including RF terminals, shopfloor workstations, barcode label printers, fixed barcode readers, digital scales and RFID tags
  
- Browser Interface, iOS and Android Supported.
- Integrated security and Menu
- Compatible with QAD Enterprise Applications 7.3K onwards
- Supports Unix, Linux and Windows servers
- Multi-Language Support
- No additional IT skills required

## RF Express on the QAD Cloud

Eagle have been deploying RF Express on the QAD Cloud since 2001, providing a seamless and fully supported solution. The move to the QAD Cloud is a straight-forward process. Whether you are an existing QAD or Eagle user considering this, please contact us for further detail.

## Extended Functionality

Eagle RF Express continually add to the standard functionality and work in line with customer demands and QAD technology and process improvements. For example, both the RF Express Continuous Transaction Process and Production Orders (discrete and repetitive) are now part of the standard solution. Beyond this we work with customers to deliver IIoT, RFID Solutions and Machine integration for scales and carousels.

*Eagle has proven to be an invaluable partner to Amtico since 2006. Their RF Express Solution for QAD Adaptive ERP enabling previously unachievable inventory accuracy, supporting our move to the QAD Cloud and most recently in our dedicated distribution warehouse.*

Head of IT- Amtico

## RF Express Module List

Eagle RF Express is Licenced as a bundle and contains an ever-evolving set of standard transactions. The RF Express Standard Bundle has over 150 transactions available updated in line with the QAD Adaptive ERP upgrades and new transactions added on an annual basis based on both work with customers and new functionality in QAD.

The list below provided the key transaction areas with a current comprehensive listing provided on request.

### RF Express Standard Bundle

- RF Purchase Order Receipts
- RF Inventory Management
- RF Inventory Enquiries
- RF Physical Counting
- RF Labels
- RF Shipping & Containerisation
- RF Production Reporting
- RF Backflush
- RF Sales Order Management
- RF Distribution Shipments
- RF Serialisation
- RF Continuous Transaction Processor

### RF Express Optional Modules

- RF Lean Manufacturing Bundle
- RF Honda-Delta Shipping Bundle
